## EDUCATION

### Purdue University

B.S. of Computer Science & Artificial Intelligence - 4.0 GPA

August 2024 - May 2027

West Lafayette, Indiana

**Relevant Coursework:** Data Structures and Algorithms, Computer Architecture, Programming in C, Linear Algebra

## SKILLS

- **AI/ML:** LLM (LangChain, RAG, CoT/Reasoning, RLHF), Agents, MCP, PyTorch, Tensorflow, GAN, RL, Diffusion, Graph Neural Networks
- **Data Science:** Numpy, Pandas, PostgreSQL, NoSQL
- **Languages & Frameworks:** Python, Java, C++, C, JS/TS, HTML/CSS, React, Flask, Gradle
- **Other:** REST API, AWS System Design, GCP, OAuth, Git, Docker, Linux

## EXPERIENCE

- **Machine Learning Engineering Intern** Jun 2025 - Present  
*Peraton Labs (Internship & Part-Time Co-op)* Silver Spring, MD
  - Developed a novel reinforcement learning (RL) agent for IoT malware detection, reducing exploration latency by 35% and increasing detection coverage by 25% compared to brute-force baselines.
  - Built a heterogeneous graph neural network with autoencoders to model inter-device relationships and accelerate RL policy convergence, improving anomaly detection accuracy.
- **Computer Vision Software Engineer** Feb 2025 - Aug 2025  
*Memories.ai (Part-Time)* Remote
  - Engineered and deployed a scalable video memory framework for AR applications, enabling persistent spatial and contextual awareness while optimizing throughput for speed and scalability.
  - Designed and published a Python SDK for the Mavi platform (<https://pypi.org/project/pymavi/>), streamlining developer workflows for video analysis.
- **Undergraduate Robotics Researcher** Mar 2025 - Jun 2025  
*IDEAS Lab, Purdue University (Part-Time)* West Lafayette, IN
  - Built real-time SLAM and novel view-synthesis pipelines in Python and C++, improving 3D scene reconstruction accuracy by 25% while ensuring deployment safety and reliability.
  - Optimized autonomous navigation algorithms, reducing mapping latency through performance tuning.
- **ML Science & Engineering Apprenticeship** Jun 2023 - Aug 2023  
*Naval Research Laboratory (Full-Time)* Washington, D.C.
  - Led a 4-member team applying UNets, Transformers, and GANs to underwater acoustics, improving transmission loss prediction accuracy by 20% compared to physics-based models.
  - Prototyped and deployed a secure Retrieval-Augmented Generation (RAG) system, ensuring data confidentiality and operational reliability.

## PROJECTS

- **Caladrius** Sep 2025  
*Tools: React Native, Python, LangGraph, GPT-5, AWS S3, QR-based encryption* [github.com/karthikcsq/Caladrius](https://github.com/karthikcsq/Caladrius)
  - Designed and implemented a cross-platform AI triage assistant that integrates medical history via encrypted QR-based data transfer, reducing data exposure through a least-exposure framework.
  - Built a multi-agent LLM pipeline to dynamically generate diagnostic questions and produce differential diagnoses with confidence scores, improving triage accuracy and prioritization in emergency settings; awarded 2nd Place in HackGT 12's track for social impact.
- **Frontera** Ongoing  
*Tools: Next.js, TypeScript, FastAPI, LangChain, Firebase, React, NoSQL* [frontera.app](https://frontera.app)
  - Founding engineer for Frontera, a "Cursor for projects" integrating an AI assistant for roadmap updates, intelligent planning, and issue-solving, alongside cofounder/talent matching, project discovery, and community features.
  - Built an AI agent ecosystem using LangChain and FastAPI integrated with Firebase authentication, REST APIs, and a React-based workspace interface to enable real-time roadmap updates and intelligent task resolution.
