#### **EDUCATION**

Purdue University

August 2024 - May 2027

B.S. of Computer Science & Artificial Intelligence - 4.0 GPA

West Lafayette, Indiana

Relevant Coursework: Data Structures and Algorithms, Computer Architecture, Programming in C, Linear Algebra

### **SKILLS**

- Languages: Python, Java, C++, C, JavaScript, TypeScript, SQL, HTML/CSS
- Frameworks & Libraries: React, Next.js, Flask, FastAPI, Node.js, NumPy, Pandas
- Databases & Data Engineering: PostgreSQL, NoSQL, Firebase, Vector Databases, Pinecone, ETL Pipelines, Data Modeling
- Cloud & DevOps: AWS, S3, EC2, Lambda, GCP, Docker, Git, CI/CD, Linux, REST API, Vercel
- AI/ML: LLM (LangChain, RAG, CoT/Reasoning, RLHF), Agents, MCP, PyTorch, GAN, RL, Diffusion, Graph Neural Networks
- Quantum Computing: Qiskit, VQE, QAOA, Quantum ML

#### EXPERIENCE

## • Machine Learning Engineering Intern

Peraton Labs (Internship & Part-Time Co-op)

Jun 2025 - Present

Silver Spring, MD

- Developed reinforcement learning agent for IoT malware detection using PyTorch and graph neural networks, reducing
  exploration latency by 35% and increasing detection coverage by 25% while processing 500K+ device events daily on distributed
  AWS EC2 infrastructure.
- Designed heterogeneous graph neural network architecture with autoencoders to model device communication patterns, accelerating policy convergence by 40% and improving anomaly detection accuracy by 18%.

# • Computer Vision Software Engineer

Feb 2025 - Aug 2025

Memories.ai (Part-Time)

Remote

- Architected production video memory framework processing 10K+ video streams for augmented reality applications using Python, Flask, and PostgreSQL, achieving 60% throughput improvement through frame sampling optimization and spatial data indexing.
- Published Python SDK on PyPI with 2K+ downloads, implementing comprehensive API wrappers, asynchronous processing, and REST API integration for video analysis workflows.

#### • Undergraduate Robotics Researcher

IDEAS Lab, Purdue University (Part-Time)

Mar 2025 - Jun 2025

West Lafayette, IN

- Built real-time SLAM pipeline in C++ and Python integrating sensor fusion and Kalman filtering, improving 3D scene reconstruction accuracy by 25% and reducing mapping latency by 30% through multithreading optimization.
- Implemented neural radiance fields for novel view synthesis, generating photorealistic scene reconstructions for autonomous navigation and robotic path planning.

# • Undergraduate Data Engineer

Aug 2024 - Dec 2024

The Data Mine Corporate Partners, Purdue University (Part-Time)

West Lafayette, IN

- Built end-to-end weed detection data pipeline processing 200GB+ drone imagery using Python, TensorFlow, and PostgreSQL, optimizing ETL workflows and indexed queries for 40% faster data retrieval.
- Engineered semantic segmentation models achieving 92% accuracy on 50K+ labeled images, reducing herbicide usage by 60% and operational costs by \$150K annually through U-Net and DeepLabv3 architectures.

# ML Science & Engineering Apprenticeship

Jun 2023 - Aug 2023

Washington, D.C.

Naval Research Laboratory (Full-Time)

- Led 4-engineer team developing deep learning models using UNet, Transformers, and GANs for underwater acoustic modeling, improving transmission loss prediction accuracy by 20% over physics-based simulations.
- Architected secure Retrieval-Augmented Generation system with LangChain and vector embeddings for classified document retrieval, implementing access controls and reducing query response time by 65%.

# **PROJECTS**

• Frontera Ongoing

Tools: Next.js, TypeScript, FastAPI, Python, LangChain, Firebase, NoSQL, REST API

https://frontera.app

- Founding engineer building full-stack AI-powered project management platform serving 500+ users, architecting microservices backend with FastAPI, Firebase Authentication, NoSQL database, and WebSocket connections for real-time collaboration.
- Engineered multi-agent LLM system using LangChain for automated roadmap generation, task decomposition, and intelligent issue resolution, reducing project planning time by 70%.

Caladrius Sen 2025

Tools: React Native, Python, LangGraph, GPT-4, AWS S3, REST API, Cryptography

https://github.com/karthikcsq/Caladrius

 Architected cross-platform AI medical triage application with React Native implementing AES-256 encrypted QR-based data transfer and zero-knowledge architecture for HIPAA-compliant medical data handling; awarded 2nd Place at HackGT 12. Built multi-agent diagnostic system with LangGraph processing patient symptoms through specialized agents, achieving 85% triage accuracy and integrating REST API backend with AWS S3 for secure medical record storage.

### • Personal Portfolio & Blog Platform

Ongoing

Tools: Next.js, TypeScript, React, Tailwind CSS, Pinecone, AWS S3, Python, Vercel https://github.com/karthikcsq/personalsite

- Developed full-stack portfolio with Next.js, TypeScript, and AWS S3 CDN integration deployed on Vercel, achieving 95+
   Lighthouse performance score and sub-1-second global load times with automated CI/CD pipeline.
- Implemented RAG-powered semantic search using Pinecone vector database and GPT-4 embeddings, processing 100+ technical blog posts for intelligent content discovery.

• Verbatim Feb 2025

Tools: Next.js, Python, OpenAI API, Google Cloud, Vercel, REST API

https://github.com/karthikcsq/verbatim

- Created production video processing platform integrating Whisper, GPT-40, Eleven Labs, and Twelve Labs APIs for automated transcription, translation, voice cloning, and lip-sync generation, processing 500+ videos.
- Architected serverless async processing pipeline on Vercel handling 2GB video files with job queues, webhook notifications, and API rate limiting, reducing user wait time by 85%.

• In The Loop Ongoing

Tools: Next.js, React, TypeScript, LangGraph, Python, FastAPI, Vercel

https://in-the-loop-ai.vercel.app/

- Built streaming AI agent platform reducing LLM token usage by 40% through intent clarification using LangGraph for stateful multi-turn interactions with WebSocket-based streaming.
- Implemented FastAPI backend supporting user interrupts and thread-level state management for 100+ concurrent sessions with conversation analytics dashboard.

• Storytime.ai Ongoing

Tools: Next.js, React, TypeScript, GPT-40, Pinecone, Python, Tailwind CSS

https://storytime-sepia.vercel.app/

- Developed AI news aggregation platform using GPT-4o for story clustering and summarization, processing 1K+ articles daily
  with Pinecone vector similarity search for duplicate detection.
- Implemented content personalization engine with collaborative filtering and ETL pipeline scraping multiple news sources, increasing user engagement by 55%.

# • Photonic Implementation of Quantum Key Distribution

Oct 2023 - May 2024

Tools: Python, NumPy, Oscilloscope, Optics Hardware

https://arxiv.org/abs/2509.04389

- Built polarization-based QKD prototype with laser systems, polarizers, and beamsplitters, achieving 95% photon detection rate
  and demonstrating secure key exchange over 5m fiber optic channel.
- Automated signal processing pipeline with Python and NumPy for bit extraction, basis sifting, and quantum bit error rate
  analysis, processing 10K+ measurement samples; published research on arXiv.

• Quantum Racer Aug 2022 – Dec 2022

Tools: Java, Android SDK, Gradle, XML

https://github.com/karthikcsq/QuantumCarGame\_Self

- Designed educational Android game simulating quantum mechanics concepts with custom physics engine, MVC architecture, and touch-based controls using Java and Android SDK.
- Packaged and distributed APK for educational outreach, reaching 100+ students in quantum computing workshops.
